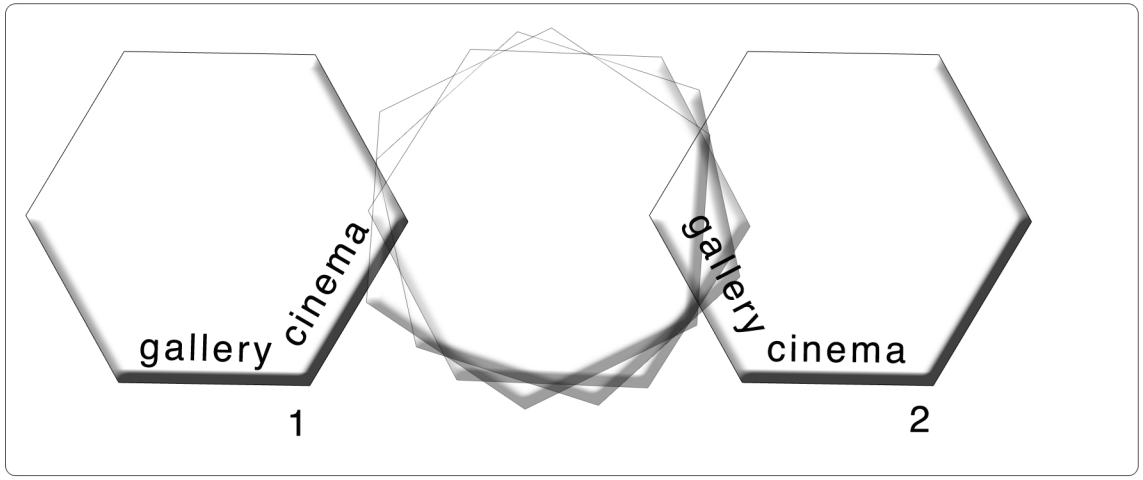
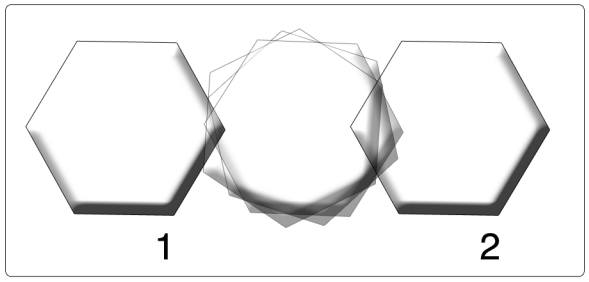
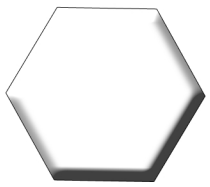
Static Structure

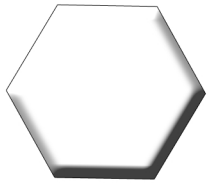
2

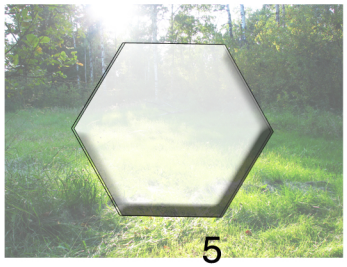
A Static Structure is a figure that is completely designed by the architect, it is a fixed construction which form is established.
A Static Structure can be position through two systems, the Analogue and the Digital.

digital system










The Digital System allows the Static Structure a set number of potential positions. The structure is able to adopt only specific, planned situations. This system gives the user a limited say and it constrains the structure to a fixed number of particular uses.
